What have you done?

This past week I refreshed my memory of the C# techniques learned in SDI, and I worked on my communication skills by talking with some coworkers. I used my strong work ethic and opportunity of having two days off in a row to complete most of my assignments early. The threat of wasting my days off of work dedicated towards school never became an issue. During my research of C#, I decided to create a new text based choose your own adventure space horror game to continue my practice of coding. I still have a lot of work to do, but it has reminded me how much fun it is to code.

What are you doing?

Currently I am trying to complete the final week of PAP1 with as strong of an effort as I have put forth thus far. I tend to have the desire to relax a bit during the final week of a class, but I know I can't do that and must push forward. This is my new threat for I have not had a problem with abusing my days off meant for school. I am also still reminding myself of the lessons learned in SDI, and I will continue to work on my game applying different techniques learned from research. I hope to complete assignments early, and work on my communication skills through social media and talking to coworkers.

What's Next?

Next is the completion of this class with the grade of A+, and I will start my new class with same level of effort as I have put into this one. I will continue to analyze my strengths and weaknesses while applying the same time management skills I have used for this past month. The Burn-Up List has been a great way for me to determine which assignments I will complete for each day of the week based on my availability, and I will bring this into the future by applying it towards my new class. I did get the new job at work, and I will now have a new opportunity of having a semi-set schedule.

How TO?

I will earn my A+ by completing the rest of my assignments to their fullest potential, and I will use my strong work ethic and opportunity of working part-time to give my new class the same effort. My self motivation and time management skills will be utilized in future classes with the use of a personal Burn-Up List. Starting next week, I will be in another department at work, and I am being given two set days every week and only one nightshift. This is a great opportunity because until this my schedule was completely chaotic and unpredictable. I know which two days I will work every week and can now manage my time looking multiple weeks ahead instead of just one.
